

CONNELLY DRILLING SAFETY TEAMS

Procedure: Backing Up Vehicle

- 1) Driver and spotter establish basic hand signals before beginning backing up of vehicle.
- 2) If spotter loses eye contact or no longer becomes visible, driver is to come to complete stop of vehicle.
- 3) If spotter is not available to assist in the backing up process, then the driver is to complete a 360 walk around the vehicle. During the 360 walk around the driver should determine a safe travel path for the vehicle.
